Dear Dr. Goodluck,

Last fall I suffered a serious biking accident and had to stop working. Up until then I had ignored my health – which is not unusual for a physician, especially a surgeon, like myself. It was then that I decided to change things and went to see you for an examination. I had heard and seen of how you had helped so many and even saved their lives. During our visits, you focused on the key aspects of my health. I want to thank you for your human kindness combined with medical skill that has helped restore my health. Your careful and thorough evaluation has made me better than ever. I shall always remain grateful for your clinical acumen. This is what it means to be a doctor.

Yours truly,

Luis Cuadros, MD
